## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-4, 15 and 16, drawn to a method for diagnosing a disease condition characterized by non-physiological levels of hepcidin.

Group II, claim(s) 5-13 and 17-20, drawn to a kit and antibody.

Group III, claim(s) 5-12, 14 and 17-20, drawn to a kit and antibody.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The technical feature linking Groups I-III appears to be an antibody that specifically binds to one or more mid-portion or carboxy terminal epitopes of hepcidin. However, Park et al (The Journal of Biological Chemistry, Vol 276, No. 11, March 2001, pages 7806-7810).

Park et al disclose hepcidin that has a 100% match of amino acids (see Figure 6 of Park) with the amino acid sequence of Hepcidin (as shown in applicant's specification. Park et al disclose that this sequence comprises a proregion (Ser<sup>25</sup>-Arg<sup>59</sup>), amino acids 25-59 (mid-portion) of the sequence disclosed by applicant. Park et al disclose antibodies that are reactive with this sequence of amino acids (p. 7810).

Art Unit: 1641

Park et al teach the use of these antibodies in assays for determining an antigen (p. 7810).

Therefore, the technical feature linking the inventions of Groups III does not constitute a special technical feature as defined by PCT Rule 13.2, as it does not define a contribution over the prior art.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

The application also contains patentably distinct species. Applicant is required to elect a single species of antibody from the patentably distinct species of antibody that binds to a mid-portion or antibody that binds to a carboxy terminal epitope. As indicated by applicant on page 40 of the specification different antibodies are required to bind the different parts of the hepcidin.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP 809.02(a).

Art Unit: 1641

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gary W. Counts whose telephone number is (571) 2720817. The examiner can normally be reached on M-F 8:00 - 4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Long Le can be reached on (571) 272-0823. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
